1. DNN - MNIST dataset:

■ Network Architecture and Performance with Confusion Matrix:

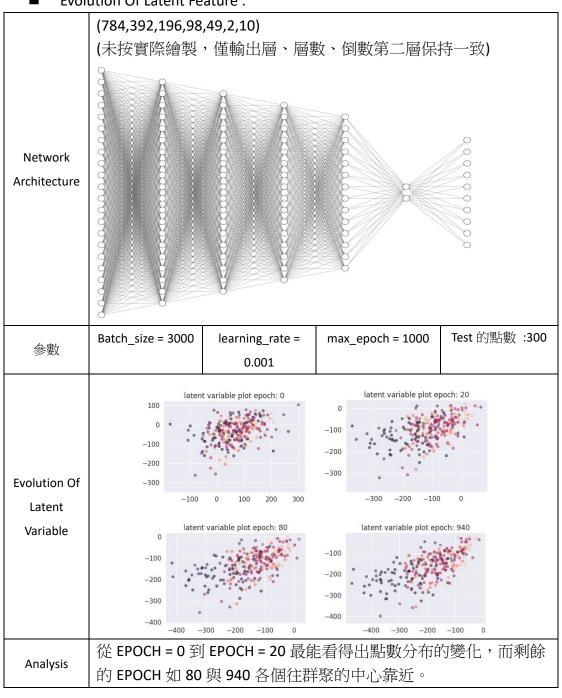

Perform Randn and Zero initialization :

因為參數設成 0,造成 Gradient Decent 無法運作,參數不能更新。

```
epoch:0.0000 Loss : 2.3026 training_acc : 0.1073 test_acc : 0.1012
epoch:1.0000 Loss : 2.3026 training_acc : 0.1227 test_acc : 0.1146
epoch:2.0000 Loss : 2.3026 training_acc : 0.1227 test_acc : 0.1146
epoch:3.0000 Loss : 2.3026 training_acc : 0.1227 test_acc : 0.1146
epoch:4.0000 Loss : 2.3026 training_acc : 0.1227 test_acc : 0.1146
epoch:5.0000 Loss : 2.3026 training_acc : 0.1227 test_acc : 0.1146
epoch:6.0000 Loss : 2.3026 training_acc : 0.1227 test_acc : 0.1146
epoch:7.0000 Loss : 2.3026 training_acc : 0.1227 test_acc : 0.1146
epoch:8.0000 Loss : 2.3026 training_acc : 0.1227 test_acc : 0.1146
epoch:9.0000 Loss : 2.3026 training_acc : 0.1227 test_acc : 0.1146
epoch:9.0000 Loss : 2.3026 training_acc : 0.1227 test_acc : 0.1146
epoch:10.0000 Loss : 2.3026 training_acc : 0.1227 test_acc : 0.1146
```

Evolution Of Latent Feature :

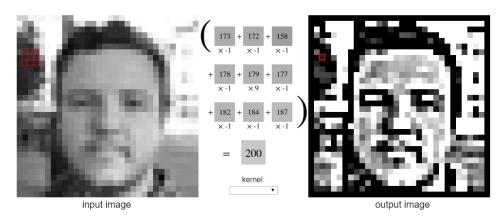

2. CNN – Medical Mask Dataset:

■ Preprcessing Method: (此段 code 在 CNN_training.py 内)

1. Crop:

利用 CSV 檔提供的圖形位置將每個頭像的 Frame 抓下來。

2. 先用 Kernel 掃過:(此 kernel 為 High pass filter,有銳化效果)

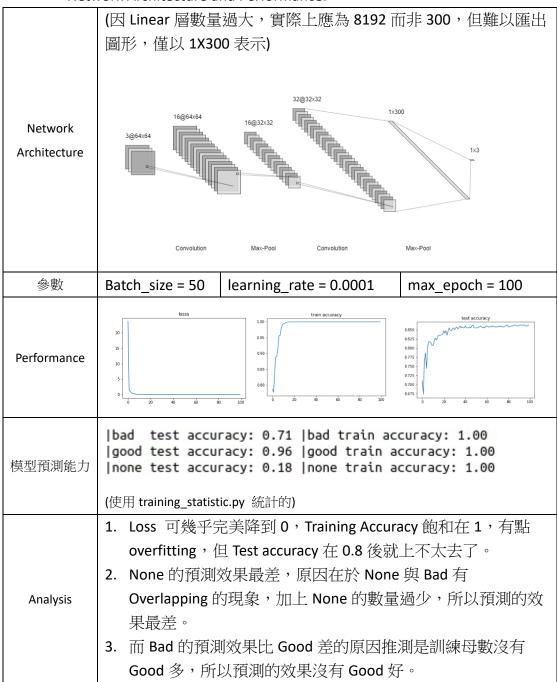

Kernel 的設計如下所示:

-1	-1	-1
-1	9	-1
-1	-1	-1

3. 再 Resize 成(1,3,64,64)

Network Architecture and Performance:

■ Show some examples and Result : (使用 label_image.py 繪製的)
